

FTVersionTrak Compare

FTVersionTrak allows you to save multiple versions of the same *505* or *Modicon Workshop* file and compare them against each other. More powerful than *WorkShop's* compare feature, *FTVersionTrak* displays a side-by-side comparison of all areas of logic, configuration, and other areas of the program. Should an edit cause unexpected results, *FTVersionTrak* allows you to roll back to a previous version.

The screenshot displays the FTVersionTrak 505 Program Comparison Results window. The main window shows a side-by-side comparison of two files, File 1 and File 2, both containing a Ladder network. The comparison highlights differences in the program components. Below the main window, a FasTrak Files Logic Viewer window is open, showing a detailed view of the logic for Network 1. The logic viewer displays a ladder logic diagram with a normally open contact labeled 'THIS_IS_A_TAG Y1' connected to a coil labeled 'C1'. The diagram also includes a description for the timer T1: 'THIS IS A DESCRIPTION FOR TIMER 1' and 'TAGS CAN BE UP TO 30 CHAR'. The logic viewer also shows a second version of the logic with a coil labeled 'C2'.

FTVersionTrak's compare feature allows you to compare the differences in program components between two versions of a Workshop file
