CTI Announces Release of 2500P-ACP1 Application Coprocessor

Dear subscriber,

The [2500P-ACP1 Application Coprocessor Module](#) includes high-speed processing and multi-protocol communications support to provide existing systems with a significant increase in performance, features, and functionality. The module runs as a PLC coprocessor performing complex logic/math functions, data logging, and communications with external devices. Programs are developed using [CTI Workbench Integrated Development Environment for IEC-61131](#).
