

## CTI Announces Release of V2.14 Firmware Upgrade for 2500P-ECC1

Dear subscriber,

CTI is pleased to announce release of a maintenance upgrade for firmware on 2500P-ECC1 Ethernet Communications Coprocessor.

This firmware update corrects :

1091: The ECC1 would occasionally fail to write a data value to the Host Controller. This occurred when a request to write a value to a Host Controller data address was received while the ECC1 was in the process reading the data value of the same Host Controller address.
