The New 2500 Series® COMPACT CPU's are here !

Big performance, small form factor

CTi is pleased to introduce our new family of Processors for the 2500 Series® Compact I/O System. Featuring the same programming software, and the same communication, remote I/O and data sharing protocols as 2500 Series® Classic Processors, our new Compact Processors work seamlessly with Classic 2500Cxxx processors and Simatic® 545 and 555 processors to manage everything from small discrete control applications to large process applications with PID loops, alarms, and special mathematical functions.

With the addition of these Processors, our 2500 Series® Compact I/O product line now becomes the 2500 Series® Compact Programmable Automation System. Three CPU models will be available with support for up to 512K user memory, 512 loops & alarms, and 8192 digital & analog I/O.

Processors may be preordered starting today with first availability expected early October. Click below to learn more:
