## FTSolution for APT® V1.3.5

We are pleased to inform you that **FTSolution for APT® V1.3.5** is available for download. This new release incorporates an important number of features and solutions including the fix for the previously explained "Out of Memory" issue.

Click [here](#) to view the complete version details.

This new version of **FTSolution for APT®**, available for free download on FasTrak's website, can be immediately installed and used if a license is under maintenance agreement.

[Download now](#) by taking into consideration [below important technical recommendation](#).

Solutions created in previous versions will be automatically updated when opened in FTSolution for APT® v1.3.0 or higher. As part of this update, Projects that are in an incrementally compiled state will automatically be incrementally compiled. Immediately after the automatic compilation, FTSolution will display the Project Upgrade Warning screen to list the updated projects and an upgrade130.log file will be created within each of these projects. It is strongly recommended to perform an immediate full download for the affected projects. Until a full download is performed, the download incremental changes option will be disabled.

To see which version of FTSolution for APT® you are running, select the Help\About menu item. The version number is displayed on the first line of the About box.

Detailed information about [FTSolution for APT®](#) software and its Options is available on our website. For technical questions, please do not hesitate to contact our support team.
